

RAYMOND PANG

pangr@umich.edu • 917.916.0995 • Ann Arbor, MI

Education

UNIVERSITY OF MICHIGAN

Graduating April 2020

B.S. Data Science, concentration in Computer Science

Computer Science Coursework:

- Data Structures & Algorithms (C++)
- Database Management Systems (SQL, MongoDB)
- Web Systems (Python, Javascript)
- Computer Security

Data Science Coursework:

- Applied Regression Analysis
- Data Mining (R)
- Data Manipulation (Python)

Experience

Researcher, Prof. Alanson Sample

Ann Arbor, MI

Software Engineering & Data Science Researcher

January 2020 – Present

- Used RFID packets and sensors to track movement of common household objects, then trained data on support vector machines to classify when people pick up, drop, or hover over objects
- Built UI interface to interact with RFID packets using Python's Kivy library that displayed real time RFID movements for fast and easy to use application for non technical users

New York Mortgage Trust

New York, NY

Software Engineering Intern

June 2019 – July 2019

- Saved traders from manually joining data in Excel by developing a GUI application using the PyQt library that loaded Excel sheets and allowed traders to quickly join sheets
- Brought power of data exploring to higher executives by building pipeline of AWS S3 crawlers using the boto3 library to organize pools of loan data that allowed for dashboard creations in Tableau
- Automated asset management workflow by creating crawlers to record monthly mortgage data from mortgage servicers and inserting data into internal database using shell scripting, Python and SQL

Capital One

Arlington, VA

Software Engineering Summiteer

May 2018

- Worked in team of five to as frontend designer to prototype a mobile web app built with Ruby on Rails that scans item barcodes and allows user to checkout
- Created webpage that predicts most common emergency dispatch type given a zip code and time of day based on training data, winning an invite to the Capital One Software Engineering Summit

Relevant Projects

Instagram, Remade

September 2019 - October 2019

- Implemented an Instagram clone with static HTML templates that used Jinja and Python's Flask library to render templates with hardcoded JSON data
- Added server side dynamic pages using SQLite to grab JSON data, adding interactive features like comments, creating users, liking, and posting
- Expanded on the project with client side dynamic pages using JavaScript and AJAX to call my REST API, allowing for a smooth user experience that resembled a social media platform like Instagram
